# Lubo Bali

## Senior Data & AI Platform Engineer

312-358-0008 | data@lubobali.com | Venice, FL | US Citizen | lubobali.com | LinkedIn | GitHub | LuBot.ai

## SUMMARY

- 3+ years in data and AI engineering, after 12 years running the finances of a 50-unit building ($500K+ a year)
- Zach Wilson (ex-Netflix, Airbnb, Meta) about my capstone: 'Best project in the bootcamp, ready to make money'
- Lead engineer at HelloPayments, and I built LuBot.ai on my own (260,000+ lines of code, 12,000+ tests)

## WORK EXPERIENCE

### HELLOPAYMENTS

***Senior Data & AI Platform Engineer*** Mar 2026 - Sep 2026

- Lead engineer for DataSwim, a multi-tenant B2B SaaS that replaced Excel for payment processing residuals and commissions.
- Built the residual engine and 7 APIs. The pilot customer ran 6 months of real data through it, $31K+ in commissions.
- Built an AI column mapper, so a new payment processor's CSV format needs no code change.
- Set up a 3-level LLM gateway (own GPU, NVIDIA NIM, OpenRouter). 80% of questions are answered with no LLM cost.
- Handled a server hack alone: removed the malware, rotated 13 secrets, and locked SSH to Tailscale only.

Tech stack: Clerk, LiteLLM, OpenRouter, Keycloak OIDC, Playwright, Next.js, FastAPI, Resend, Svix

### LUBOT.AI

***Founder & Lead Engineer*** Jun 2025 - Present

- Built LuBot alone: multi-tenant AI SaaS for business analytics and stock advice, 260,000+ lines of code, 12,000+ tests.
- Built a 4-step router (rules, regex, embeddings, then LLM). 95%+ of questions are routed with no LLM cost.
- Built an MCP server so LuBot works from Claude Desktop, plus RAG over user files with NVIDIA embeddings and FAISS.
- Python does all the math in 9 analysis modules and the LLM only writes the text, so it can't make up numbers.
- Built with Claude Code in parallel git worktrees: test first, then integration tests on staging after every merge.

Tech stack: NVIDIA Nemotron stack, FAISS, AdalFlow, Langfuse, Sentry, Prometheus + Grafana, Vite + React 19, TradingView Charts

### RE/MAX

***Data Engineer*** Jan 2024 - Feb 2025

- Built a Python ETL pipeline that pulled 10K+ property listings from MLS APIs into MySQL, so agents could see market changes fast.
- Automated the daily refresh with validation checks. 3+ hours of manual work a day went down to 15 minutes.
- Built Tableau dashboards for inventory and prices across 20+ neighborhoods, used by 15+ agents to find deals before competitors.

Tech stack: Python, MySQL, Tableau, MLS APIs

### 2828 ARTHINGTON CONDOMINIUM ASSOCIATION

***Financial Data Manager*** Jan 2013 - Jan 2024

- Managed the finances of a 50-unit building for 12 years ($500K+ revenue a year) with SQL and Excel: leases, vendor contracts and budgets.
- Automated reconciliation in Excel. Month-end close went from 3 days to under 2, and the copy-paste errors stopped.

Tech stack: PostgreSQL, MySQL, SQL, Excel, Power BI, Tableau, financial reporting

## TECHNICAL SKILLS

**Languages & Backend:** Python, SQL, TypeScript, FastAPI, REST APIs, Pytest, multi-tenant SaaS, Stripe, Clerk, webhooks
**Data:** PostgreSQL, Supabase, Snowflake, dbt, Databricks, Spark, PySpark, Delta Lake, Airflow, Kafka, Redis
**AI & LLMs:** Claude Code, Claude API, NVIDIA Nemotron + NIM, LiteLLM, OpenRouter, RAG, FAISS, pgvector, MCP servers, tool calling
**Cloud & DevOps:** AWS (Lambda, Step Functions, S3, DynamoDB, Bedrock), Terraform, Docker, Linux, GitHub Actions, Sentry, Grafana
**Frontend & Security:** React, Vite, Next.js, Tailwind | NIST CSF 2.0, OWASP LLM Top 10, CIS Controls, incident response

## EDUCATION

**Associate of Applied Science, Computer Systems** Aug 2026
Lincoln Land Community College

**AI, Data and Analytics Engineering Tracks (Highest Distinction)** Mar - May 2026
DataExpert.io

**Bachelor of Science, Basketball Coaching | Master of Science, Sports Management**
National Sports Academy 'Vasil Levski'

## PROJECTS

**JOBRADAR-AI** - AI Job Search Agent on Databricks (Scored 100/100)

- Pulls jobs from 129 sources into pgvector for search, and an MCP server with 11 tools lets the agent act on them.

Tech stack: Databricks, Spark, Lakebase, pgvector, FastMCP, Python | github.com/lubobali/JobRadar-AI

**AWS-JOB-STREAMER** - AI Job Matcher on AWS (Public on GitHub)

- Pulls jobs from job board APIs, scores each one with Amazon Bedrock, and sends me email and SMS alerts.

Tech stack: AWS Lambda, Step Functions, DynamoDB, Bedrock, Terraform | github.com/lubobali/aws-job-streamer

**SENTINEL-AI** - AI Email Agent (Public on GitHub)

- Sorts my email in real time and blocks prompt injection. 181 tests, 93% coverage.

Tech stack: Python, FastAPI, Gmail API, NVIDIA NIM, Postgres | github.com/lubobali/Sentinel-AI

**MERGEAI** - AI Data Analyst (Scored 100/100)

- Upload a CSV and ask questions in plain English. AI agents write the SQL, check it and explain the answer.

Tech stack: TypeScript, Next.js, NVIDIA NIM, Neon Postgres | Live: merge-ai-omega.vercel.app | github.com/lubobali/mergeAI

More projects: All projects: lubobali.com/projects | GitHub | LuBot.ai
